DETAILED ACTION

1. Applicant's election without traverse of Group I, Species II, claims 1-12, in the reply filed on August 23, 2004, is acknowledged.
2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zaguroli (US 5,598,785) in view of Sherburne (US 3,140,848).

Zaguroli discloses trolley track rail 12 provided with hanger 10 for connecting to a support; however, Zaguroli does not show the support where the hanger is hanged from.

Art Unit: 3617

Sherburne, Figure 1, shows a hanger provided with fastening means for mounting the hanger to overhead I-beam 4.

In view of Sherburne, it would have been obvious to one skilled in the art to provide fastening means to the hanger of Zagurolli for allowing the hanger to be mounted to available overhead I-beams, in a manner similar to that taught by Sherburne, so as to achieve expected advantages thereof, such as quick and easy connections and disconnections.

Regarding the method steps recited in instant claims 8-10, note that the process of forming the structure of Zagurolli, as modified, inherently requires the method steps recited in the instant claims.
